

KONIKA CHAKARBORTY

Aspiring Data Analyst

Raipur, Chattisgarh | +91 6266255259 | konikachakraborty84@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Aspiring Data Analyst with hands-on experience in SQL, Power BI, Python, and Excel. Developed end-to-end analytics projects across HR Analytics, Telecom Churn, and E-commerce, covering data cleaning, SQL analysis, EDA, KPI reporting, and interactive dashboard development. Passionate about using data to solve business problems and support data-driven decision-making.

EDUCATION

Bachelor of Computer Applications (BCA) — Graduated

Mahant Laxminarayan Das College, Pt. Ravishankar Shukla University | 2023 – 2026 | Final Percentage: 79.87%

TECHNICAL SKILLS

SQL (PostgreSQL): Joins, CTEs, Window Functions, Subqueries, Views, Aggregations

Python: Pandas, NumPy, Data Cleaning, Exploratory Data Analysis, Matplotlib

Power BI: DAX, Power Query, Data Modeling, Interactive Dashboards

Excel: Pivot Tables, XLOOKUP, Charts, Conditional Formatting

Tools: PostgreSQL, Git, GitHub

Areas of Expertise: Data Cleaning & Preparation, Exploratory Data Analysis, Business Intelligence & Dashboarding, KPI Tracking & Reporting, Trend & Pattern Identification, Problem-Solving, Communication & Stakeholder Collaboration, Remote Teamwork

PROJECTS

Telecom Customer Churn Analysis | SQL • Python • Power BI | [GitHub](#)

- Extracted **2,666 customer records** using SQL, cleaned and prepared the data in Excel, and analyzed it to uncover churn patterns and behavioral trends.
- Built a 4-page interactive Power BI dashboard featuring 25+ KPIs, custom DAX measures, and drill-down visualizations.
- Identified an overall 14.55% churn rate (388 churned customers) and pinpointed key drivers, including International Plan usage, high service-call volume, and high usage patterns.
- Designed a What-If Retention Simulator to model the impact of retention strategies on churn reduction and projected revenue savings.

E-Commerce Analysis Dashboard | SQL • Python • Power BI | [GitHub](#)

- Built a 3-page interactive Power BI dashboard (Executive Overview, Customer Analysis, Product & Payment Analysis) covering ₹2.01 Cr in sales across 97.3K orders and 32.3K products, with dynamic filters for customer state, product category, and payment type.
- Extracted raw transactional data using SQL and cleaned and prepared it using Python (Pandas) to ensure accuracy and consistency for analysis.
- Analyzed payment behavior and product performance, finding credit card as the leading payment method at 76.8% of transactions and identifying top revenue categories like Bed, Bath & Table (₹1.71M).
- Mapped customer distribution across 4,095 cities and 27 states, highlighting São Paulo as the top revenue city (₹2.80M) through geographic and freight-cost analysis.

HR Analytics Dashboard | SQL • Python • Power BI | [GitHub](#)

- Built an interactive Power BI dashboard analyzing **1.47K employee records**, with dynamic filters for department, gender, and education field, tracking key HR metrics including attrition rate, average salary, and average tenure.
- Extracted and cleaned employee data using SQL and Python (Pandas) to prepare it for attrition trend analysis and dashboard visualization.
- Identified an overall attrition rate of **16.12% (237 employees)**, with Research & Development recording the highest departmental attrition and Sales Executives the most affected job role.
- Analyzed attrition drivers across age groups and travel patterns, finding employees aged 26-35 and those who travel rarely for business showed the highest attrition, while only 46.41% of cases involved overtime work.

VIRTUAL EXPERIENCE

BCG X – Introduction to Data for Decision Makers | Forage Job Simulation

- Performed campaign performance analysis to evaluate marketing effectiveness.
- Communicated data-driven business insights and recommendations to stakeholders.

CERTIFICATIONS

- HackerRank SQL – Basic, Intermediate, and Advanced
